PROJECTS

QR Code Scanner [View Project]

- Created a fast, fully browser-based QR scanning tool that works instantly without any app installation.
- Integrated real-time scanning using device camera access for instant decoding.
- Designed a clean, responsive UI for smooth scanning on both mobile and desktop.
- Implemented fast processing to detect and extract QR data with high accuracy.
- Ensured privacy by performing all scanning locally in the browser, without uploading data.
- **Tools:** HTML, CSS, JavaScript, QR Scanner Library

MyHome Mistri (Full-Stack Service Marketplace) [View Project]

- Developed a comprehensive service **marketplace connecting homeowners with local service providers** like electricians and plumbers.
- Built a **secure authentication system** for both users and providers with specialized dashboards for profile and booking management.
- Implemented a **real-time booking system** allowing users to schedule services and providers to manage upcoming requests and status updates.
- Designed a **dynamic content feed** where providers can post media updates (images/videos) to showcase their work using Base64 encoding.

Tools: MongoDB, Express.js, Node.js, JavaScript, HTML5, CSS3, Render (Deployment)
